

INTEGRATION OF LIVESTOCK

The integration of livestock in oil palm estate started in December 1994, for the purpose of maximizing land use and cutting the cost of weeding. Since the first introduction of the Kedah-Kelantan (KK) breed, this integration scheme has become a part of company's business activity. Cattle are breed in reared estate while jaras cattle are dispatched to the feedlot.

The integration of livestock in LCSB oil palm estate are managed by estate managements center as listed below:
